

TANK ALERT® AB

Indoor Alarm System with Auto Reset and Battery Backup

The **Tank Alert® AB** indoor alarm system monitors liquid level conditions in lift pump chambers, sump pump basins, holding tanks, sewage, agricultural, filters and other waste applications.

The sleek design of the alarm features a user friendly touch pad with **colored LED indicators** for easy visual detection. The alarm horn and **red LED** indicator activate for a high water alarm condition. Once the condition is cleared, the alarm **automatically resets**. The **green LED** indicates 120V primary power to the alarm. If primary power fails, the alarm continues to work due to **9V battery backup**.

FEATURES

- NEMA 1 rated enclosure for indoor use
- Automatic alarm reset
- 9 VDC battery backup with low battery chirp
- Colored LED indicators:
 - Red alarm
 - Green power on
